

## Consultancy for quality management system implementation

### Objective:

- ensuring the operation of the quality management system, through effective implementation of its procedures and instructions

### During this stage, consultancy is provided for:

- testing the QMS operation by applying the designed documents and working methods
- reviewing and customizing the documents, based on the comments and suggestions received from the personnel
- ensuring training and awareness of the personnel regarding the working methods, the role of the quality management system and the necessity of respecting its requirements
- identification and implementation of the adequate corrections and corrective actions, following possible non-conformities identified during the internal audits

### Other info:

- the duration of this step varies, depending on your company size (number of positions, number of employees), as well as on the processes complexity
- it is recommended that the personnel involved in the QMS implementation (especially department managers) previously participate in the "General presentation of ISO 9001:2015 requirements" training
